

Provisional MIS 6 composite event record

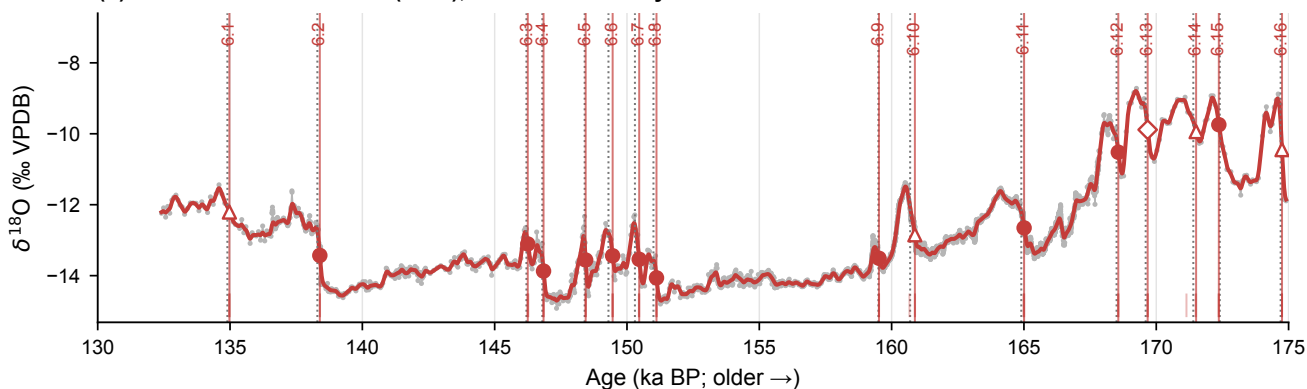

Direction-constrained maximum gradient after light Gaussian smoothing

- observations
- literature search anchor
- event-age QC: stable
- △ event-age QC: review
- smoothed proxy
- | local tuning candidates (not age uncertainty)
- ◇ event-age QC: moderate

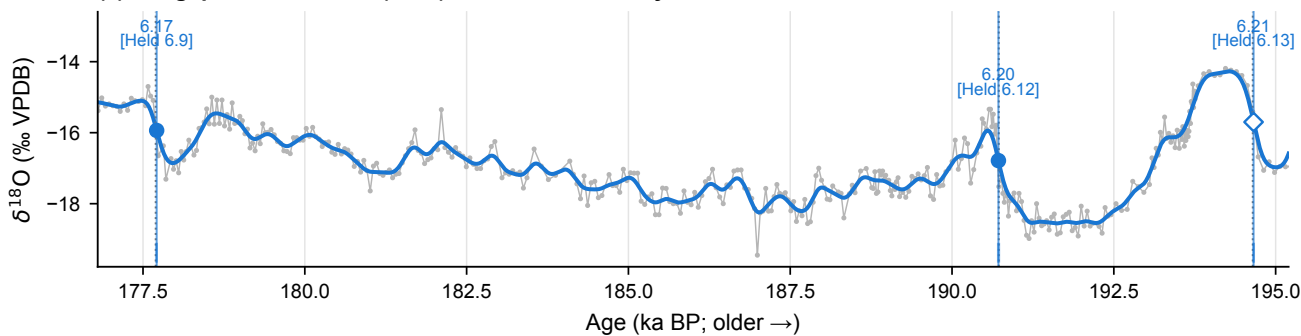

(a) Composite sequence and source records

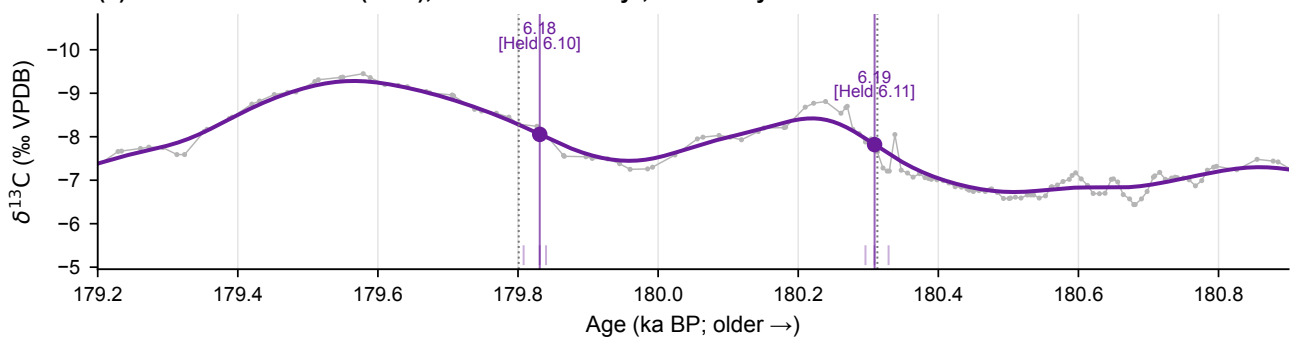

(b) MF — Fohlmeister et al. (2023); Gaussian $\sigma = 50$ yr

(c) Huagapo — Burn et al. (2019); Gaussian $\sigma = 100$ yr

(d) Sofular — Held et al. (2024); Gaussian $\sigma = 50$ yr; reversed y-axis

Short vertical ticks show local algorithm-tuning candidates, not age-model uncertainty. Proxy changes are local, record-specific, and not directly comparable.
